

TECHNICAL DATASHEET

STALOC WELDING PROTECTION SPRAY

SQ-700

PRODUCT DESCRIPTION

STALOC welding protection spray is suitable for all areas of welding. The applied transparent film protects all components, especially welding nozzles from freezing and welding spatter.

STALOC welding protection spray can be used regardless of the welding technique, even for gas-shielded welding.

The product is silicone-free which ensures that the application of the product has no influence on post-welding processes like painting, electroplating, chromium coating, etc.

Only if you consider hot-dip galvanizing, we recommend to clean the surfaces before entering the following process.

The applied film temporarily serves as a corrosion inhibitor.

APPLICATION

Recommended application – further information can be found in the material safety data sheet.

Spray from a distance of roughly 20-30 cm onto the surface, use thin layers only.

TECHNICAL PROPERTIES

ATTRIBUTE	UNIT	SPECIFICATION
basis		Natural oils dissolved in water-based emulsion
Working temperature	°C	+5°C to +80°C

- emulsifying agent ensures a homogeneous film on the surface

SAFETY INFORMATION

Please send your request for the latest version of the material safety data sheet (MSDS).

PACKAGING / VOLUME

400 ml 520 3e á 12 pcs. per box
